DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-5 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The method of selectively setting a number of subfields of claim 1 and the subfield number setting circuit of claims 3-5 have not been disclosed. In Fig. 1, the timing signal generating circuit (200) comprising the DY selecting circuit (Fig. 4) further comprising the start pulse generating circuit (Fig. 5) is the closest disclosure, however it is apparent the timing signal generating signal is lacking circuitry necessary for one of ordinary skill to make or use this invention. The correlation between figures 4 and 5 is not apparent. Figure 5 shows inputs (Ds0...Ds6), the origin of which are not disclosed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 2674

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6,127,991 to Uehara et al. Uehara et al. (Fig. 2 & 3) teaches a display arranged in a matrix (15) to perform a gray scale (Col. 3, Line 41), selecting number of subfields (29), dividing a frame into subfields (Fig. 9), controlling on or off each of the pixels (Col. 4, line 34), providing pixels in association with each of the intersection of a plurality of scanning lines (19, 20) and a plurality of data lines (21), and supplying a scanning signal sequentially (Col. 2, Line 7).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following US Patent is cited to further show the state of the art in gray scale display driving using subfields:
